The World's Local Training Provider

Introduction to XWiki

Trainer – M. Hussaini

The World's Local Training Provider

What is XWiki?

Wiki Platform

It is an enterprise-level wiki platform.

Content Handling

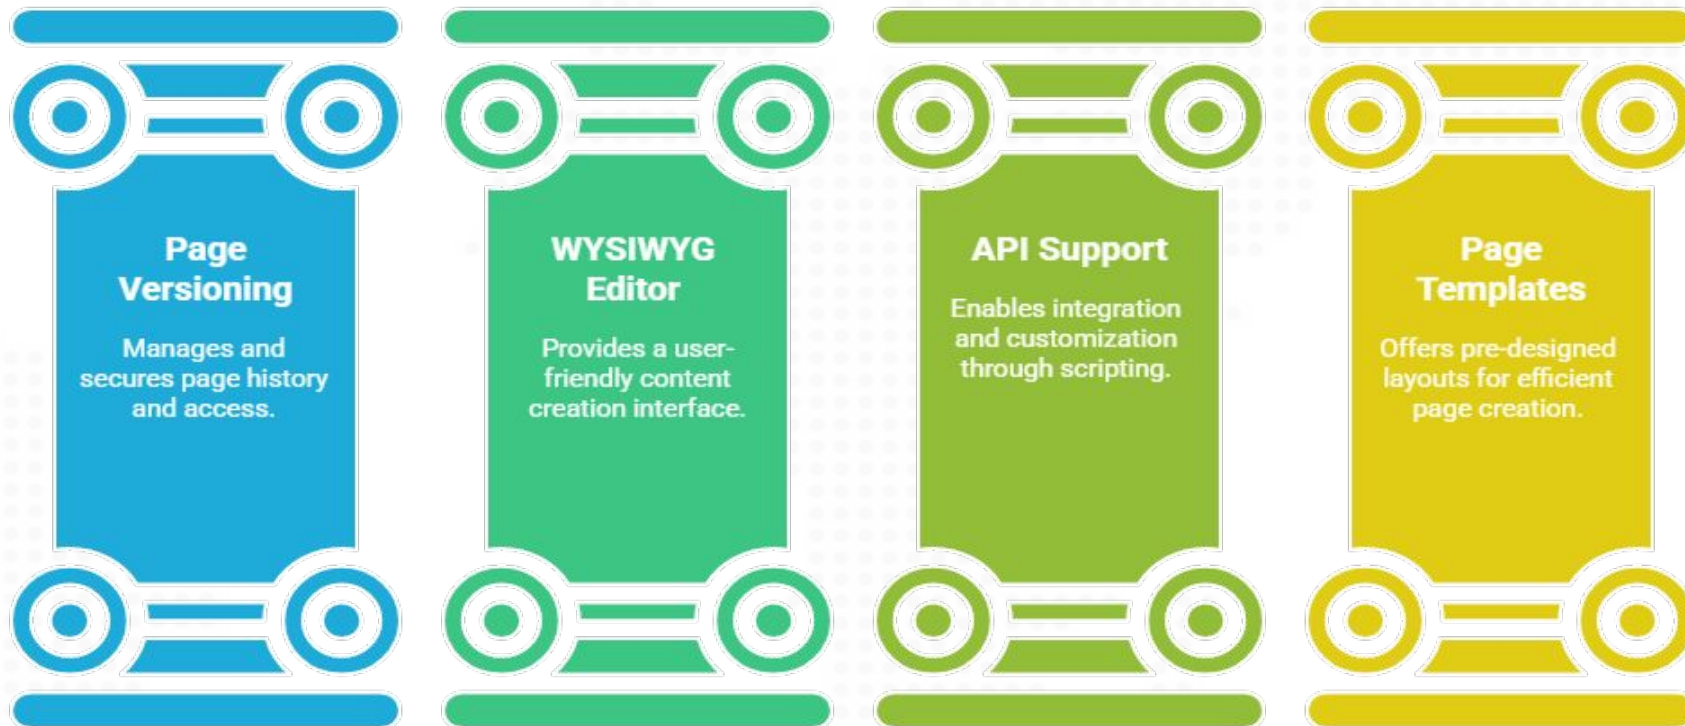

It handles both structured and unstructured content.

Open-Source Nature

It is open-source and extensible.

Core Features

Use Cases in Organizations

Collaborative Documentation

Tools and processes for team-based document creation

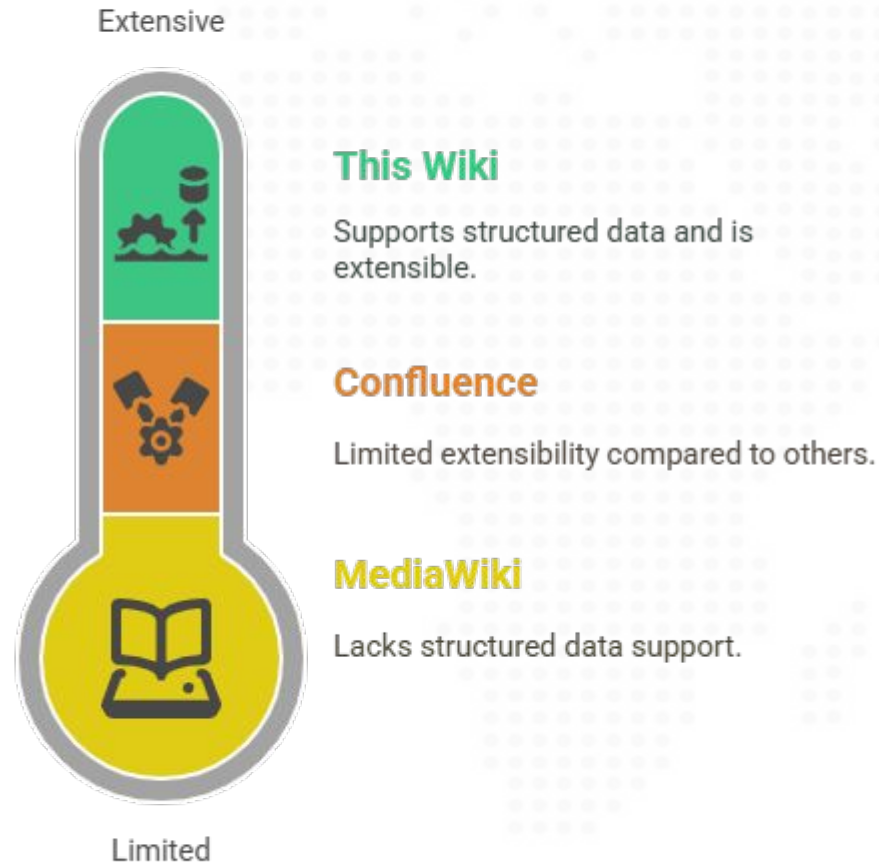

Custom Business Tools

Tailored applications to meet specific business needs

Intranet Knowledge Base

A centralized repository for organizational knowledge

Comparison with Other Wikis

Installation Options

Installing and Configuring XWiki

User & Permission Configuration

1

User Creation

Create users and groups within the system.

2

Rights Assignment

Set view, edit, and admin rights for users.

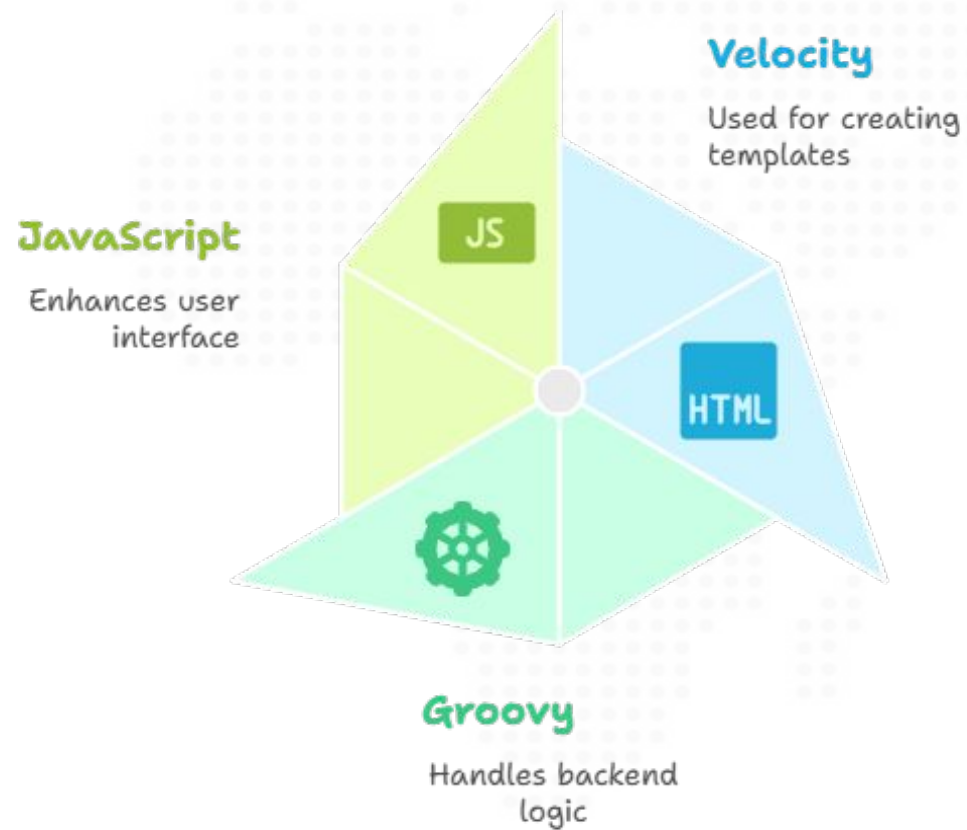

3

Access Control

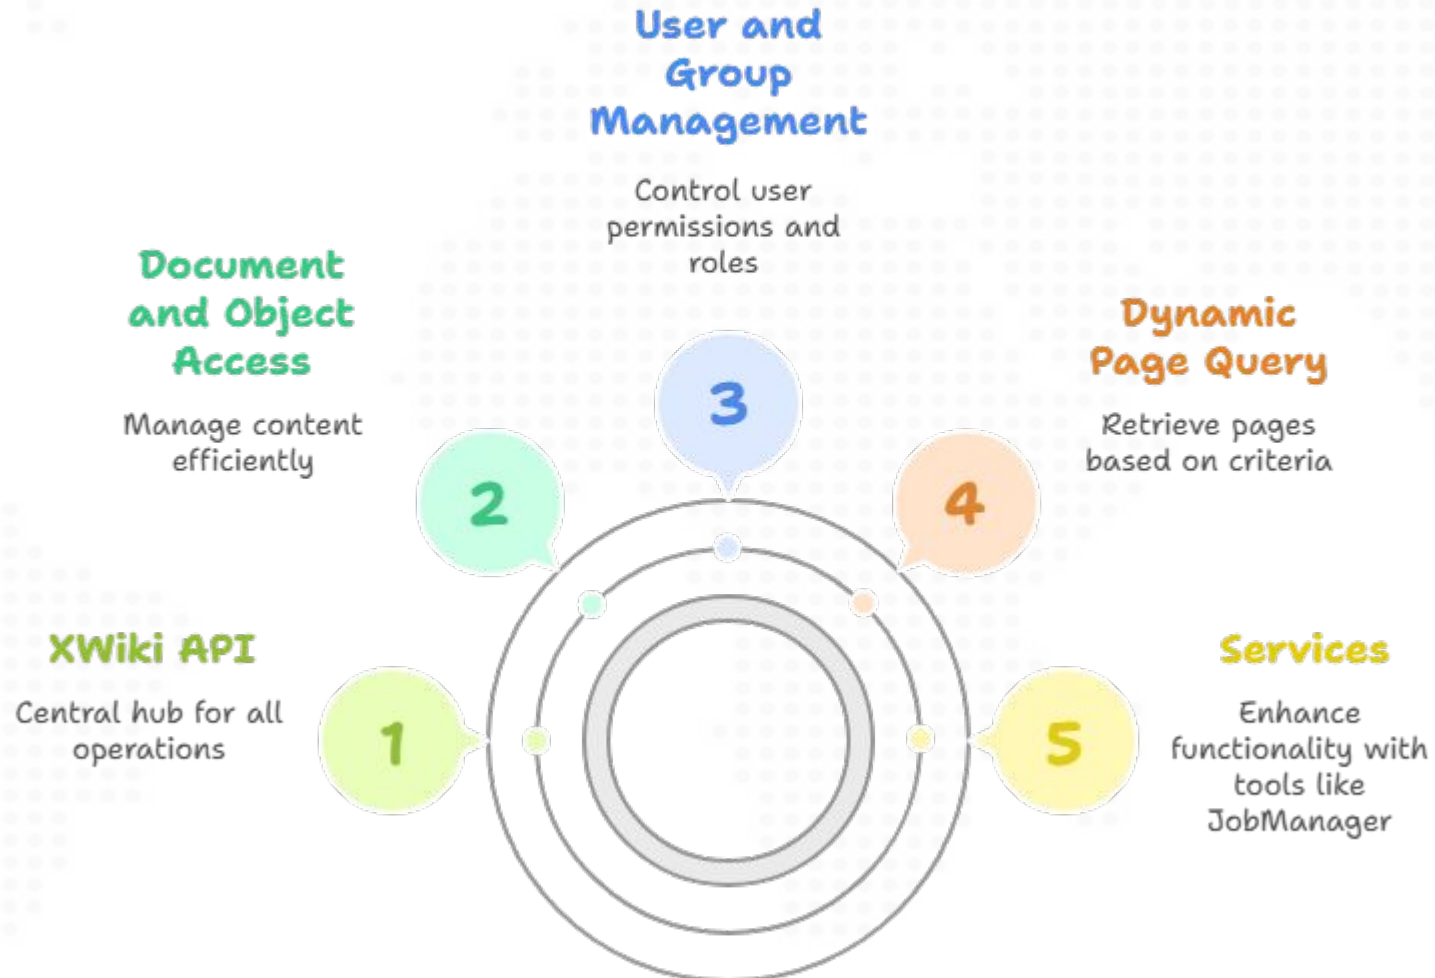

Control access at the page and space level.

Understanding XWiki Development Model

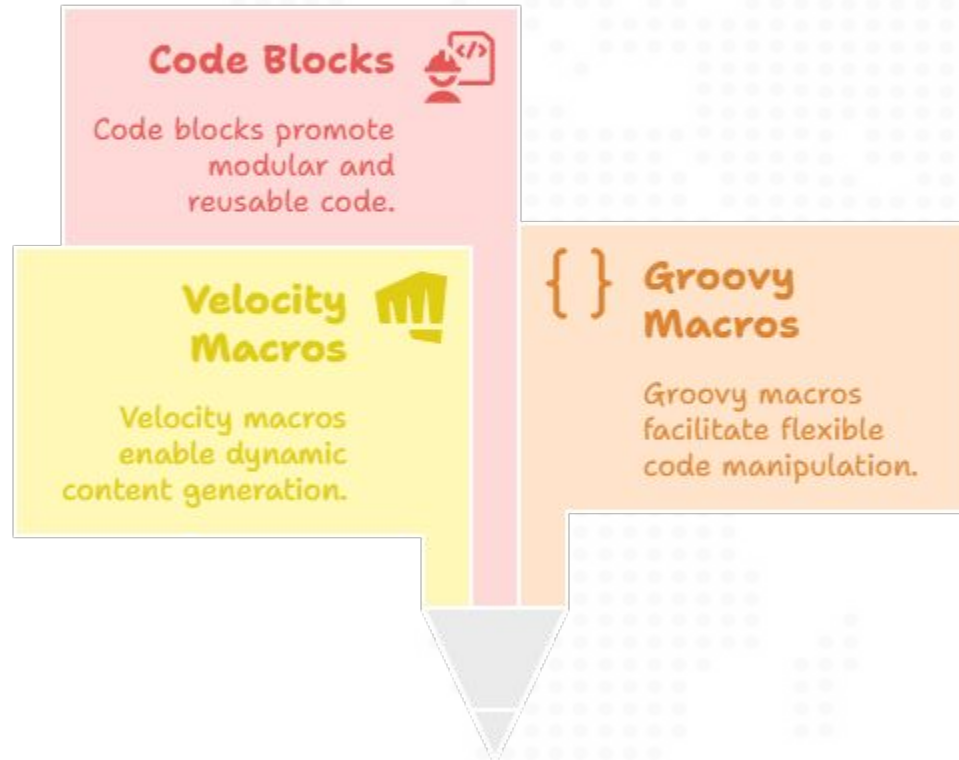

Supported Scripting Languages

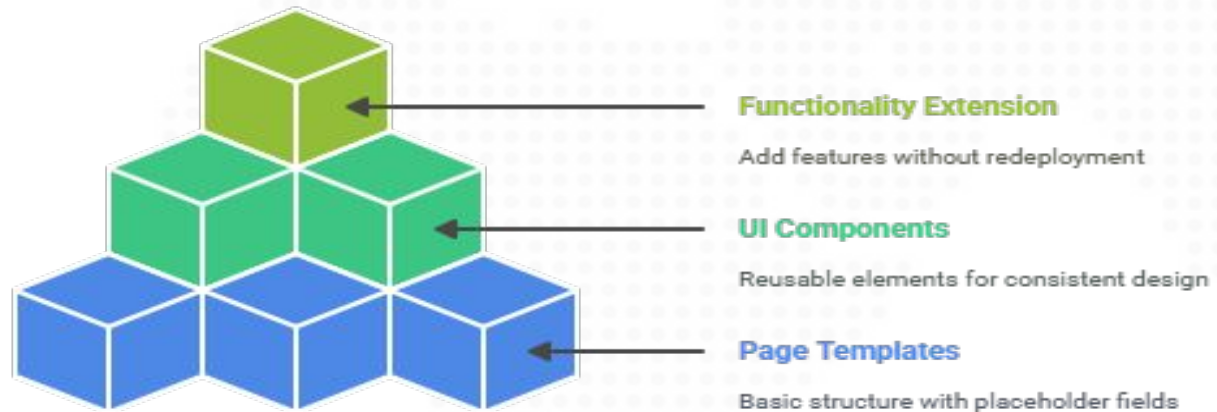

XWiki API Overview

Macros & Reusability

Extend functionality without redeploying

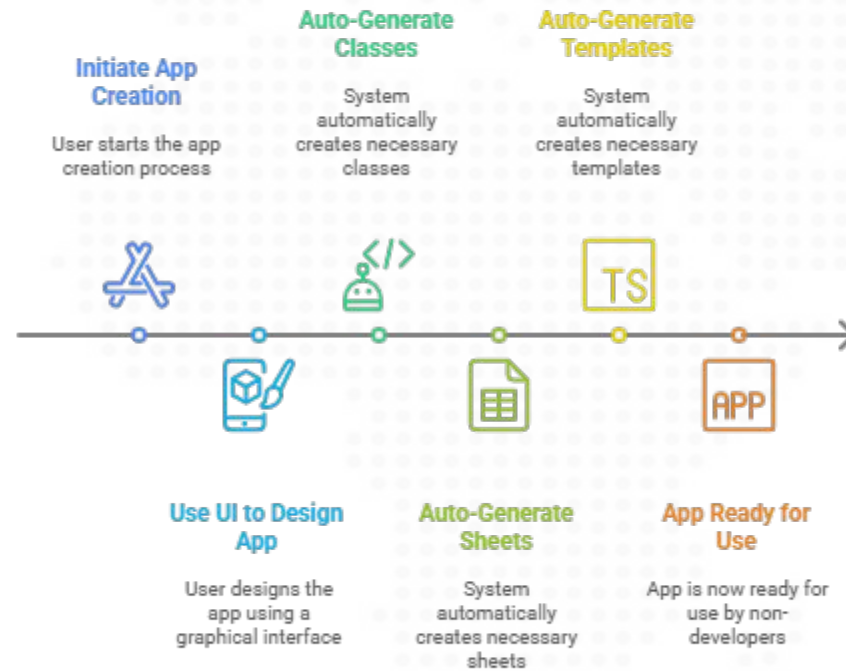

Good Practices

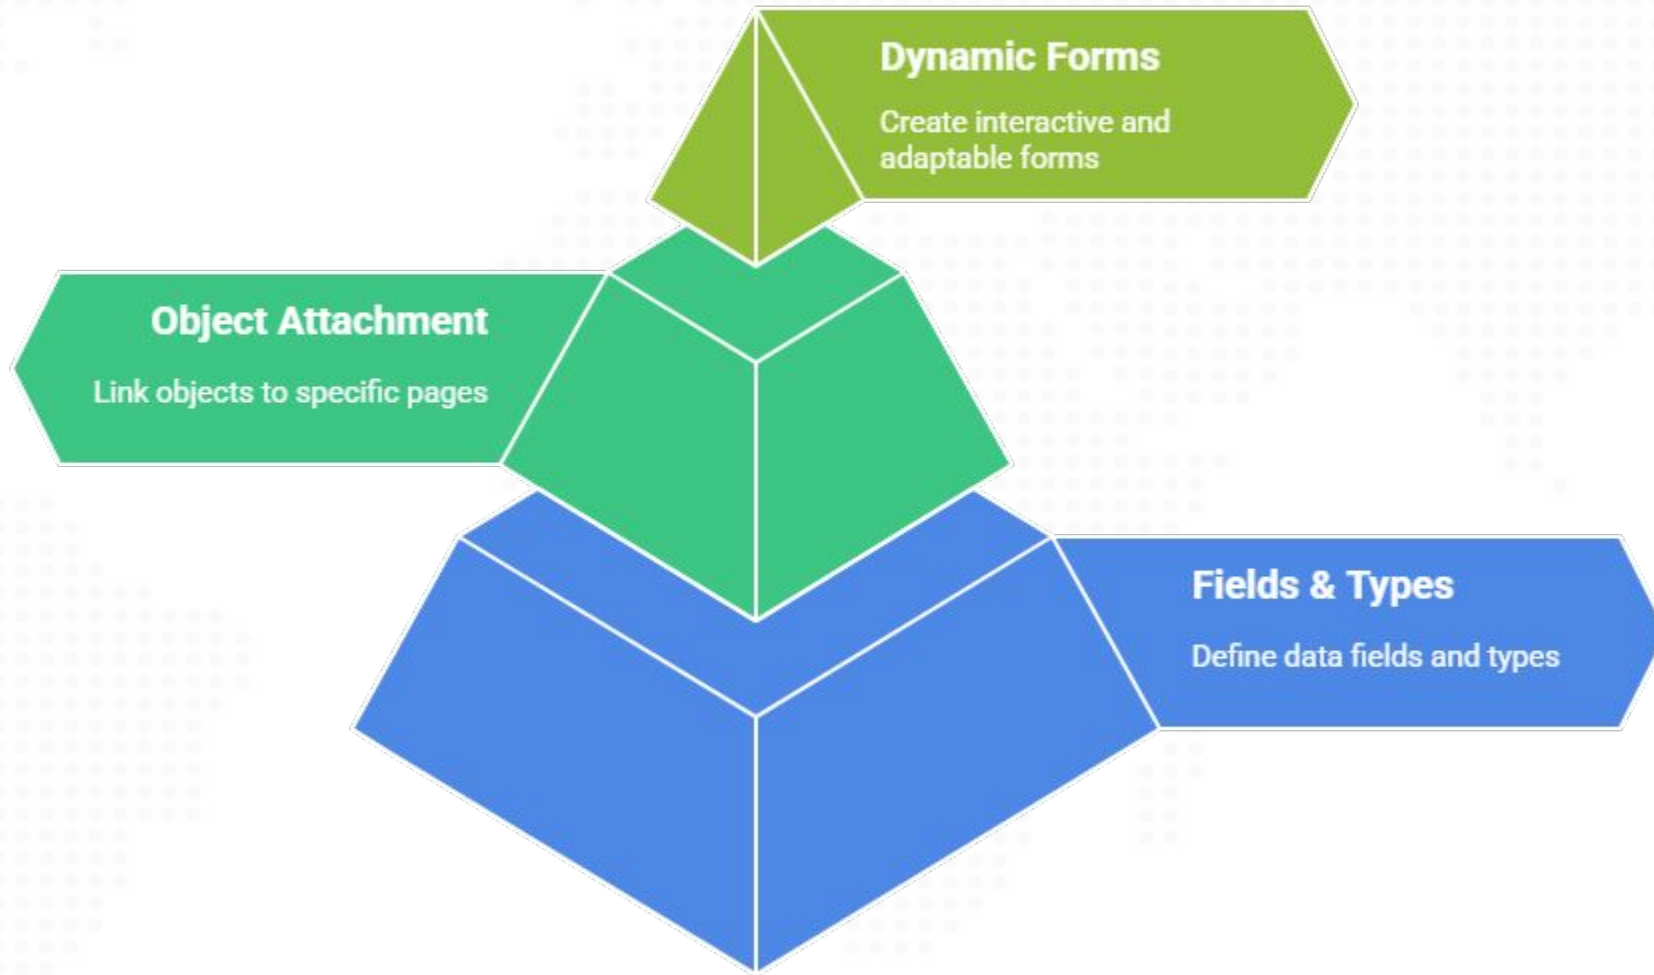

Developing Custom XWiki Applications

App Within Minutes (AWM)

Classes and Objects

Dashboards and Views

LiveTables

Interactive tables for filtering data

Charts and Graphs

Visual representations of data trends

Macros and Scripting

Customization tools for advanced users

Extending XWiki with Plugins and Extensions

Extension Manager

Install Extensions

Install extensions directly through the user interface.

Search Repository

Search for extensions in the official repository.

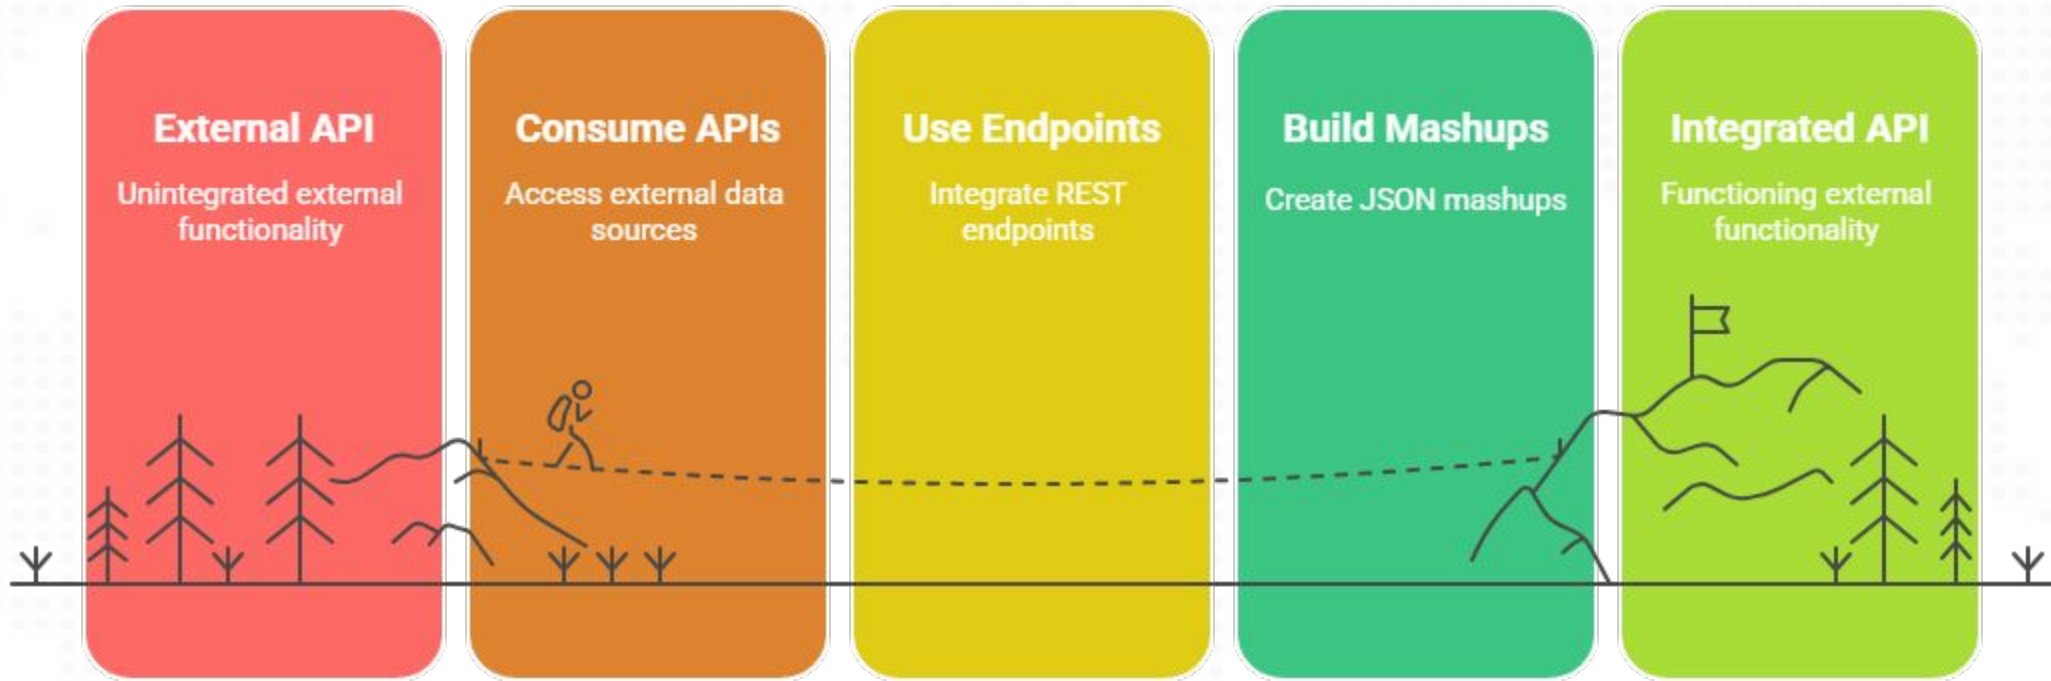

Manage Versions

Manage extension versions and dependencies effectively.

Building Custom Extensions

REST API Integration

Adding Third-party JS Libraries

WebJars

A package manager for web dependencies

Chart.js

A library for creating charts and graphs

D3.js

A library for manipulating the DOM with data

Template Integrity

Maintaining the structure of core templates

Developer Tools

Admin Tools

Offers tools to manage cache and logs for system maintenance.

Debug Panel

Allows developers to inspect and debug code in real-time.

Script Editor

Provides a platform to write and edit scripts for XWiki.

Security and Performance Optimization

Security Best Practices

Secure Communication

Implement HTTPS to encrypt data in transit and use secure headers to protect against common web vulnerabilities.

1

Limit Script Rights

Restrict script and programming rights to minimize potential attack vectors and unauthorized code execution.

2

Apply RBAC

Implement Role-Based Access Control (RBAC) with fine granularity to ensure users only have necessary permissions.

3

Performance & Backup

Implement Caching

Enhances performance by storing frequently accessed data.

Schedule Backups

Ensures data recovery in case of failures.

Optimize Queries

Improves database efficiency and speed.

Manage Attachments

Reduces storage and improves access speed.

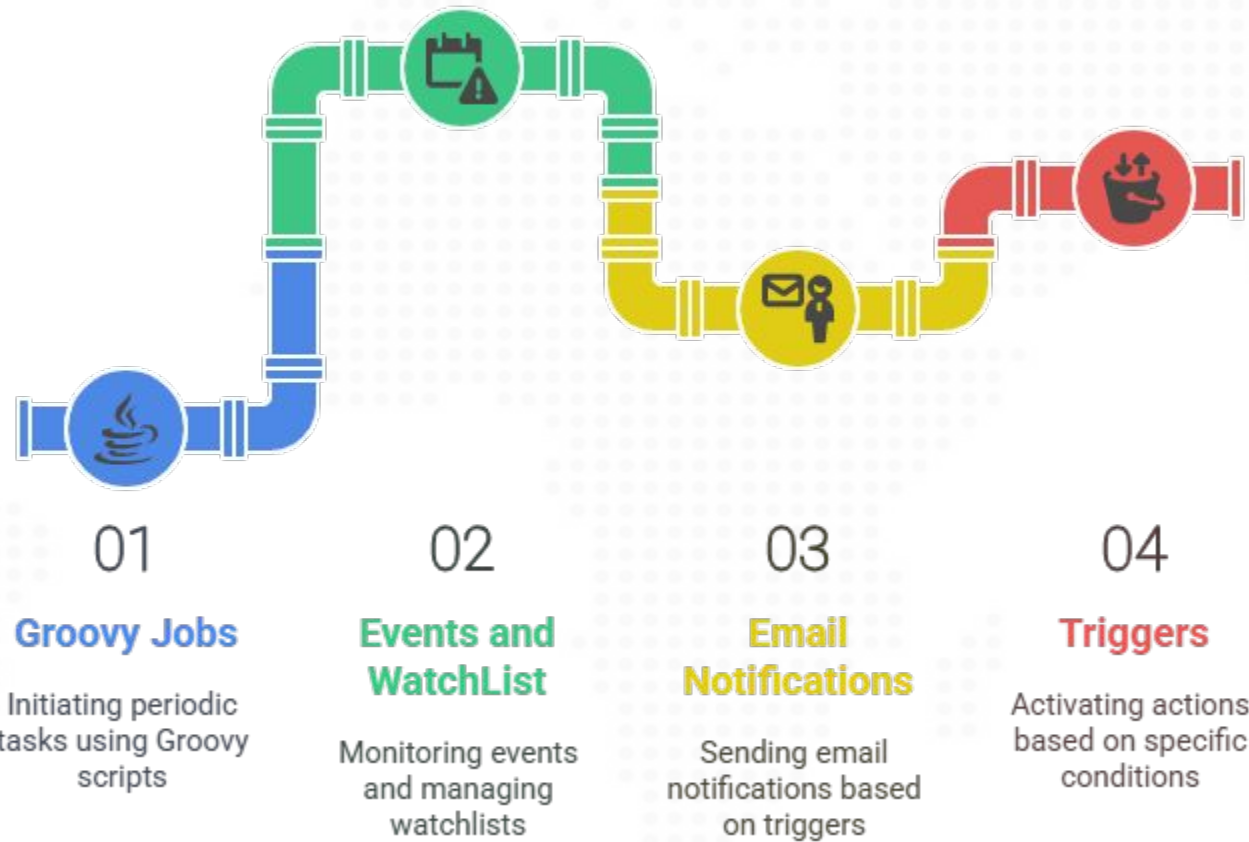

Advanced Integration and Automation

External Integrations

Workflow Automation

Cloud Deployment

Docker Deployment

Utilizing Docker containers for deployment, ensuring consistency.

Database Options

Integration with AWS RDS or GCP Cloud SQL for data storage.

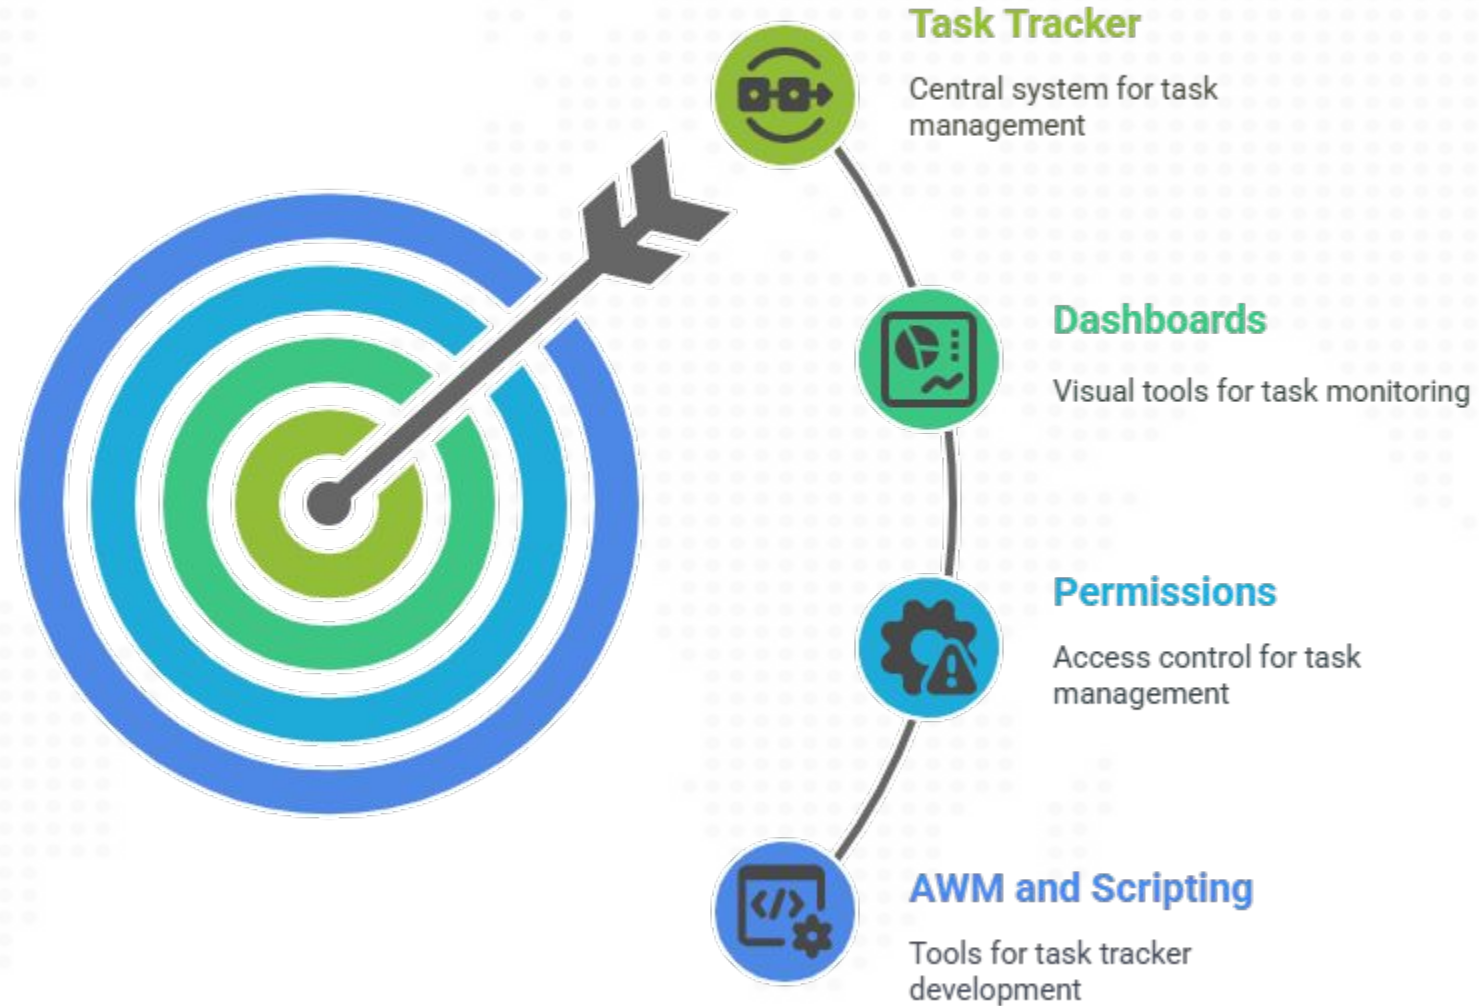

CI/CD Pipelines

Implementing CI/CD pipelines to automate updates and deployments.

Practical Workshop

Real-world Scenario

Create the Data Model

Define Classes

Establish the structure of data entities like Task and Project.

Use Pickers

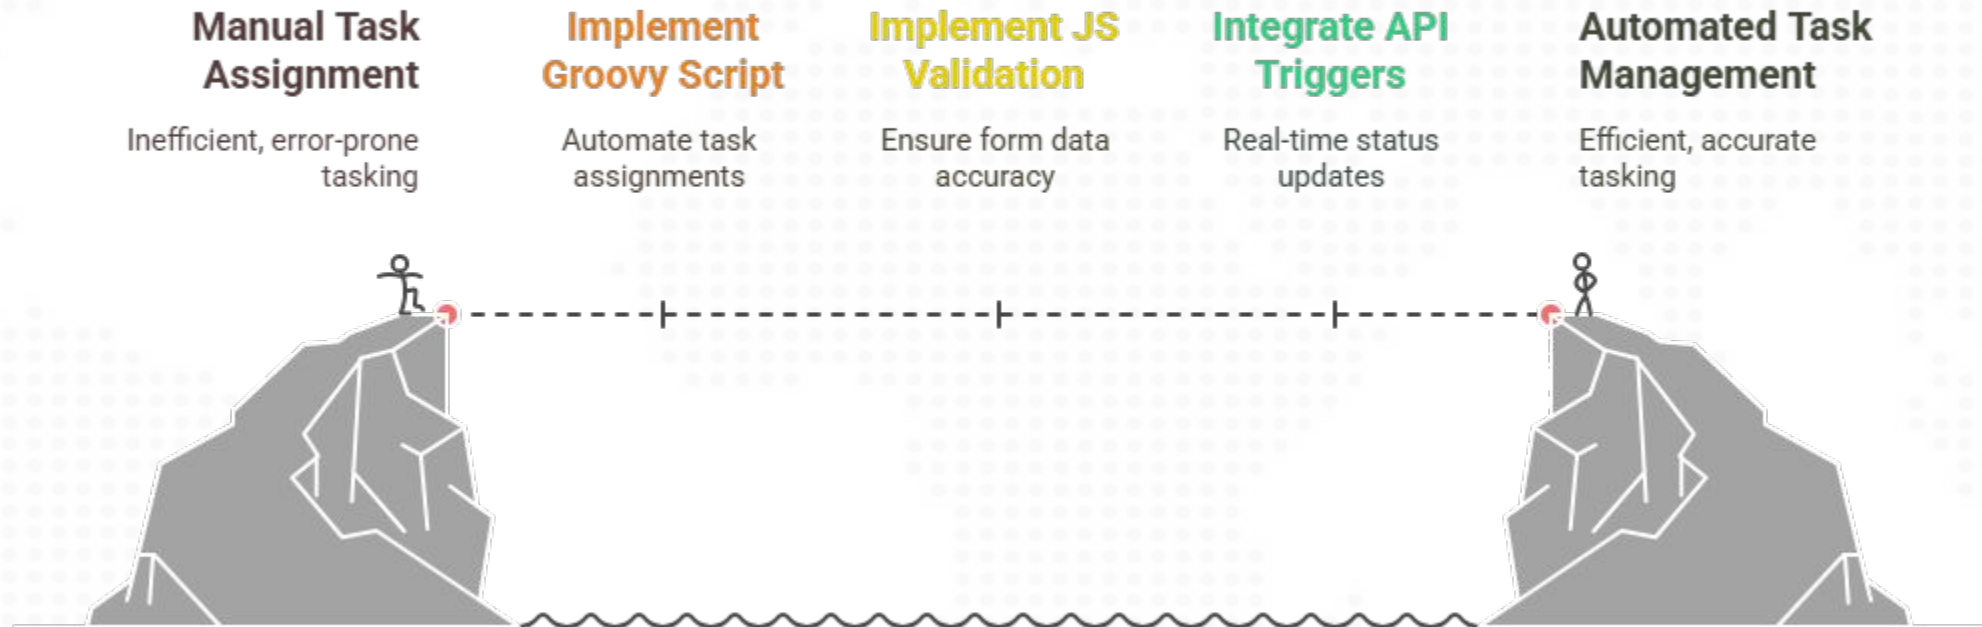

Implement list and user pickers for data selection.

Generate UI

Automatically create the user interface for data interaction.

Enhance with Automation

Add Reporting

LiveTables

Filterable views using LiveTables for data analysis.

Weekly summary

Receive a weekly summary of reports via email updates.

Embed charts

Embed charts to visually track project or task status.

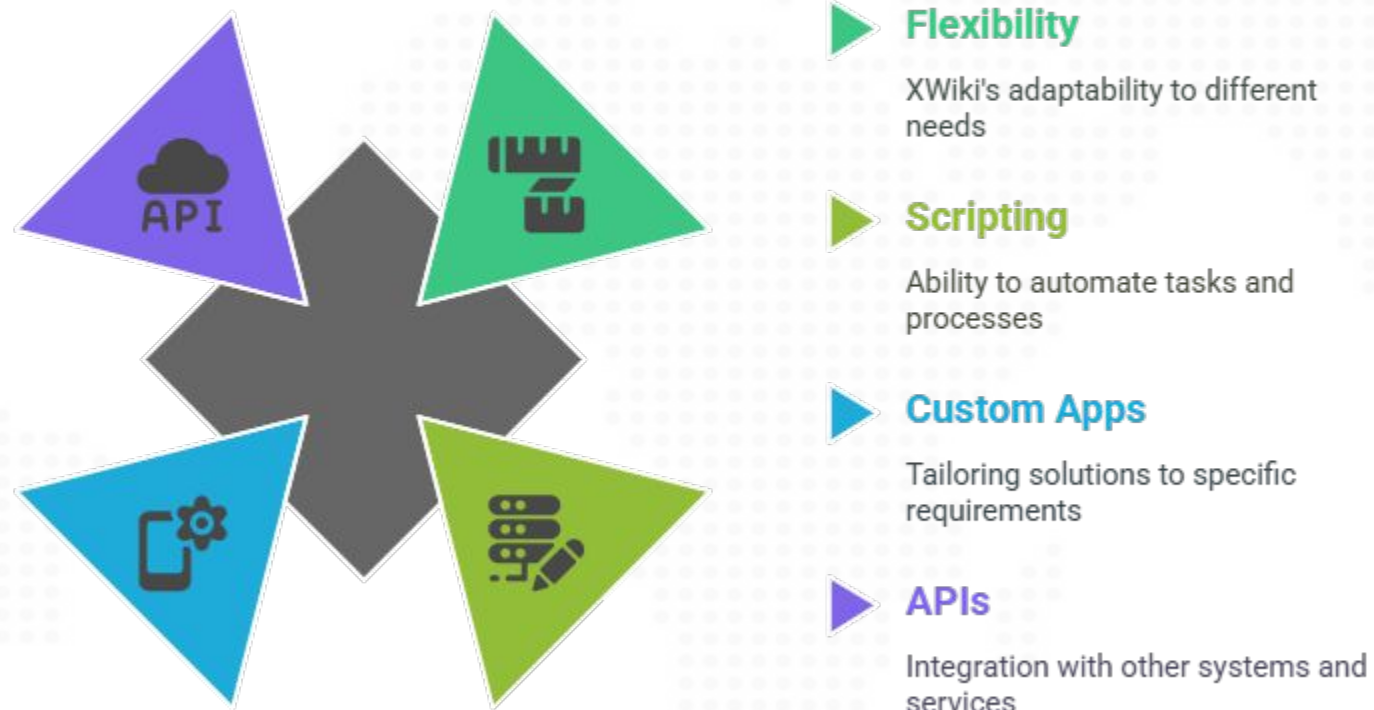

Iteration and Feedback

Summary and Next Steps

Key Takeaways

What's Next?
